

GSCCC Stakeholder Meeting Highlights
December 2, 2014

Twenty-eight attended the meeting, which was held at DES offices in Concord.

Tom Blanchette of NH Motor Speedway gave a presentation on the green initiatives of the organization, including recycling and using E15 (ethanol 15% gasoline 85%) in the race cars. Twice a year, the number of staff and visitors at the racetrack swell to the size of a larger NH city and the organization has used creative ways to reduce waste and energy consumption, including Air Titan, a method of efficiently and efficiently drying the track after a rain.

Paul Lockwood, Transportation Analyst at DES, presented on electric vehicle infrastructure deployment in NH. DES recently secured \$25,000 for EV infrastructure and Paul's presentation is a "first run" with the intent to show to regional planning groups to encourage them to incorporate EV charging sites in their plans.

Dolores Rebolledo, GSCCC Coordinator, provided a quick update on recent GSCCC events and the NERCCC grant. Meeting adjourned at 11:20.
